PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with 2+ years of hands-on experience designing and operating cloud infrastructure on AWS and Azure. Proven track record of cutting infrastructure costs by ~40% through Auto Scaling strategies and accelerating delivery cycles via robust CI/CD pipelines. Skilled in Docker, Kubernetes, Terraform, Ansible, Jenkins, and Grafana, with strong foundations in Linux systems administration and networking. Passionate about automation, observability, and bridging development and operations to ship software reliably and at scale.

KEY ACHIEVEMENTS

~40%	30%	150+	Multi-Cloud
Reduction in AWS infrastructure costs via Auto Scaling	Faster IT ticket resolution via structured troubleshooting	End-users supported with zero-downtime IT operations	AWS + Azure hybrid platform with live production exposure

TECHNICAL SKILLS

Cloud	AWS (EC2, VPC, S3, RDS, IAM, Auto Scaling, ALB, CloudWatch, SNS) Azure (VMs, VNets, NSG, Load Balancer, Azure Monitor)
DevOps & CI/CD	Jenkins Pipelines • Docker • Kubernetes • Ansible • Terraform • GitHub Webhooks • Automated Deployments
Monitoring	Grafana • AWS CloudWatch (Metrics, Logs, Alerts) • Azure Monitor
Linux	User & Package Management • File Permissions • Shell Scripting (Bash) • System Administration
Networking	DNS • HTTP/HTTPS • TCP/IP • VLANs • Routing Fundamentals • Leased Line Connectivity
Languages	Bash • YAML • Python (scripting) • HCL (Terraform)

WORK EXPERIENCE

DevOps Engineer

November 2024 – Present

Vidyakul Learning Space • Gurugram, India

- Engineered an Auto Scaling strategy on AWS, **reducing estimated infrastructure costs by ~40%** while maintaining high availability during peak traffic periods.
- Architected hybrid multi-cloud connectivity frameworks integrating Azure and AWS, enabling seamless workload portability and disaster recovery capabilities.
- Designed and configured **centralized monitoring dashboards** using Grafana and AWS CloudWatch with real-time alerting via SNS, reducing mean time to detect (MTTD) for production incidents.
- Built and maintained end-to-end **Jenkins CI/CD pipelines** with GitHub Webhooks, automating container builds and deployments to cut manual release effort significantly.
- Collaborated cross-functionally with application and infrastructure teams to streamline production deployment operations, improving release cadence and stability.
- Managed Kubernetes cluster operations for containerised workloads, including pod scheduling, service discovery, and rolling updates.

IT Support Executive

August 2023 – November 2024

Whiz Works • India

- Spearheaded end-to-end IT operations for **150+ users**, managing enterprise network setups, hardware provisioning, software deployments, and SLA compliance.
- Architected and managed critical network infrastructure including gateways, managed switches, VLANs, and dedicated leased line connectivity for business continuity.
- **Reduced IT service ticket resolution time by 30%** by designing structured, multi-tiered troubleshooting workflows and runbooks.
- Streamlined procurement, rental agreements, and IT asset lifecycle management, optimising vendor relationships and minimising downtime.

PROJECTS

DevOps Automation & Kubernetes Deployment [GitHub →](#)

Tools: Terraform • Ansible • Docker • Jenkins • Kubernetes • AWS

- Built a complete end-to-end DevOps CI/CD pipeline automating AWS infrastructure provisioning with Terraform, configuration management with Ansible, containerised deployments via Docker, and scalable delivery through Kubernetes.
- Implemented Infrastructure as Code (IaC) patterns to ensure consistent, repeatable, and auditable environment provisioning across dev, staging, and production.

Multi-Node CI/CD Pipeline Automation [GitHub →](#)

Tools: Jenkins • Docker • Ansible • GitHub • Linux

- Designed and implemented a multi-node Jenkins pipeline to automate the build, test, and deployment of containerised applications across test and production environments.
- Integrated Ansible for post-deployment configuration management, achieving zero-touch deployments and consistent system state across all nodes.

Production-Grade Multi-Cloud DevOps Platform [GitHub →](#)

Tools: AWS • Azure • Terraform • Docker • Kubernetes • Grafana

- Architected a production-grade platform spanning AWS and Azure, demonstrating multi-cloud deployment, cross-cloud networking, and unified observability with Grafana dashboards.

CERTIFICATIONS

CCNA – Cisco Certified Network Associate
Network Bulls

Cloud & DevOps Program
Intellipaath

EDUCATION

Bachelor of Business Administration (BBA)
Indira Gandhi University (IGU)

Graduated 2024
